Instructions for using the logo

The logo is usually printed in four colours on a white background. If necessary, the logo can be printed in 100% black, blue (C100% M22%), or be left white on a black or blue (C100% M22%) background.

The logo must have enough space around it. Other elements (other logos, text or images) are not allowed inside the safety zone. The safety zone also defines the minimum distance from the bleed edges in printed materials. The safety zone corresponds to the height of the flag in each direction.

The logo may not be partially covered. It may not be disassembled, and its parts may not be used for other purposes. The right to use the logo must always be agreed beforehand with a representative of the event organizer.
